AB - J05078559 The resin compsn. is obtd. by adding (C) 0.1-10 pts.wt. of a thermoplastic polymer obtd. by melt reaction of (a) 80-20 pts.wt. of an aromatic polycarbonate resin, (b) 20-80 pts.wt. of a polyamide resin and (c) 0.01-10 pts.wt. of zinc oxide w.r.t. 100 pts.wt. of (a)+(b) for 10-240 mins. at 220-280 deg.C to (A) 95-5 pts.wt. of a polyester resin and (B) 5-95 pts.wt. of a polyamide resin w.r.t. 100 pts.wt. of (A)+(B).

- USE/ADVANTAGE - The thermoplastic polymer improves compatibility between the polyester resin and the polyamide resin and the obtd. thermoplastic resin compsns. consisting of polyester resin and polyamide resin have merits of both resins, i.e., excellent heat, impact and chemical resistance and mouldability.

- In an example, mixt. of 60 pts.wt. 'Panlite RL-1225' (RTM), 40 pts.wt. 'UBE Nylon 1013FB'(RTM), and 1 pt.wt. zinc oxide was melt kneaded for 30 mins. at 230-240 deg.C, cooled and ground to give a thermoplastic polymer. A mixt. of 60 pts.wt. 'Panlite RL-1225'(RTM), 40 pts.wt. 'UBE Nylon 1013FB'(RTM) and 1 pt.wt. of the thermoplastic polymer was blended for several mins. and kneaded at 230-250 deg.C to give pellets and the pellets were injection-moulded to give a test specimen with a heat distortion temp. of 132 deg.C and an Izod impact strength of 21 kg.cm/cm (Dwg.0/0)
